

## 'Environmentally friendly cooling'

The Comcool Evaporative Cooler

The class leading Comcool is our large volume heavy duty evaporative cooler. Housed within the all steel chassis is a powerful 500MM axial fan and cooling system that can deliver a constant stream of chilled air to help keep staff, guests or processes cool when traditional cooling isn't an option.

Ideally suited to large, open, area's such as factories, warehouses or marquee events Comcool only uses a fraction of the energy an air conditioner would, plus as it uses water rather than refrigerants to produce the cooling there is no warm air exhaust.

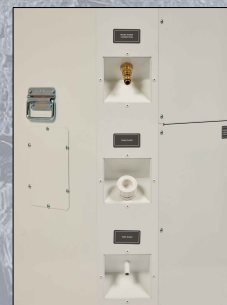

Designed and built to withstand the rigours of commercial use, these rugged coolers can run using the onboard 90L tank or the direct feed point which facilitates connection to a continuous water supply using a standard 'Hozelock' type fitting. Lockable castors and tank purge system help ensure Comcool is easy to position and empty when you've finished with it, while the inline filter helps to reduce the issues caused by dirt and grime in the water.

**Product Specifications:**  
Equivalent Cooling Duty  
20kW / 71000 BTU  
Running Current 2A  
Airflow 5165m<sup>3</sup>  
Dimensions  
1660x640x500mm  
Supply 230v 13A  
Weight (empty)100kg  
Tank Capacity 90 litre  
UK Manufactured

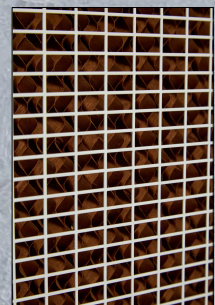

- ✓ Refrigerant free cooling
- ✓ Low energy cooling
- ✓ No warm air exhaust required
- ✓ Full steel construction
- ✓ On board tank or direct feed from tap
- ✓ Lockable castors
- ✓ Multiple fan speeds

Cable pocket and sturdy grab handles

Simple connections

Suitable for large open spaces
